

Major Project

- **Project Name:**
Internet of Things May Major Project

- **Project Description:**

Build a IOT based system, using thingspeak, IFTTT

Create a channel to read two different sensor values, create a react trigger and connect it to IFTTT using webhook and send a notification message on your mobile phone through sms.

Take screenshots of all process and attach it to word file and submit the project.

Tinkercad:

Build a system using 3 servo and 3 sensors, when each sensor activates, the corresponding servo should operate 45deg.

Only simulation, no hardware to be purchased.

Take screenshots and attach it to word file and send
